

3 Ways to boost your bottom line with the Schur[®] Star Concept

Learn how to increase efficiency and boost your bottom line in three simple but effective ways!

Do you want to boost your bottom line with the Schur®Star Concept?

Running an efficient production is essential for any business and probably also yours. By following these three ways you can increase the efficiency of your production, reduce waste and in the end boost your bottom line. Learn how in this mini whitepaper.

1 Increase efficiency with a full-scale offering high capacity

By having a full-scale solution with high capacity you can increase the efficiency of your production. Higher efficiency means more packed products and shorter packing time. This is possible with the Schur®Star Concept, as it is the world's most flexible packaging solution.

2 Improve filling to your needs

The Schur®Star Packaging Machine both offers manual, semi-, and fully automatic filling. You can fill the bags from both the top, the side, or the bottom. This means you can improve the filling process of your bags. By being able to customise the machine to your needs, you increase your productivity and can cut down costs in the filling process.

3 Run multiple bag formats on the same line

By filling your packaging on the Schur®Star machine, you can run multiple products at the same time. This is because the machine can handle different bag formats. This reduces downtime and the number of times you have to shift batches during your production. All bags are delivered on a unique string and open to their full width at the filling point. Moreover, the machine includes low drop height and soft landing equipment, preventing damage to your products!

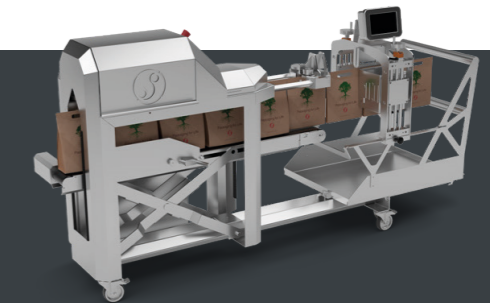

Two machine platforms that meet all requirements

The Schur®Star Concept is the world's most flexible packaging solution. It is based on a versatile and tailor-made bagging machine, combined with customised, premade bags.

Schur®Star

- Full scale solution, high packing capacity
- Multiple filling positions, multiple index filling
- Gas flush
- Variable footprint
- Capacity up to 80 bag per minute
- Manual, semi- and fully automatic filling
- Run multiple bag formats without additional tooling costs
- Quick change-over to run multiple products on the same line

Schur® StarLight

- High flexibility, despite the low investment
- Compact, low weight, moveable
- No compressed air required
- Simply power on & pack
- Capacity up to 25 bag per minute
- Manual, semi- and fully automatic filling
- Run multiple bag formats without additional tooling costs
- Quick change-over to run multiple products on the same line

How it works

The bagging of your products has never been easier than with the Schur®Star Concept. Bagging can be manual, semi- or fully automatic. The premade bags are all delivered on a unique string that makes production efficient.

Moreover, bag formats are produced from the raw materials and with functionalities of your choice. Your bag is a valuable marketing tool that will support your product to make your brand stand out.

Implement all three ways

By utilising the Schur®Star Concept you can implement all three ways. This is because the concept is based on a one-of-a-kind synergy of our more than 175 years of experience, know-how, creativity, and ingenuity.
